## FORTY YEARS OF SPRING MIGRATION IN SOUTHERN CONNECTICUT

## BY ARETAS A. SAUNDERS

For many years it has been my habit to rise early on spring mornings, and spend the early hours keeping track of the bird migration. In earlier years this was in the vicinity of New Haven, Connecticut. Later it was in Norwalk, and finally in Fairfield. All of these are about the same latitude along the coast. Observations first began in 1902 but are rather incomplete in the earlier years. From 1908 to 1913 I was elsewhere, but from 1914 to 1949 the records are quite complete.

I will not assert that I always found each species on the day its first individuals arrived. I know that in some cases I did not, for others informed me, at times, that they had found certain species a day or two before I did. I have used some of these earlier dates whenever I was sure that they were reliable. For example, Mr. Frank Novak, warden of the Birdcraft Sanctuary in Fairfield, frequently found the first House Wren a day or two before I did.

In finding birds I frequently used my knowledge of bird songs. It is much easier to hear a bird sing, and identify it by the song than it is to get a clear view of it in just the right light to identify it. I do not mean, however, that I relied on song in all cases. The Veery, for example, usually arrives several days before it begins to sing. If a song was unrecognizable, or that of a rare species, I made it a practice to see the bird.

In general, when a species arrives its numbers begin to increase, and it is soon common. Occasionally a single individual arrives long before the rest of its species. I found this true on two occasions with the White-eyed Vireo, and once with the Indigo Bunting. In each case it was many days before another individual appeared. Both are birds that arrive in May, and in each case the early individuals arrived in April.

My data on the arrivals of shore and water birds are not as complete, largely because such birds were scarce in the earlier days. When the Migratory Bird Treaty Act (1916) was put into effect, and the shore birds were all protected, the increase in these species was remarkable. The case of the Laughing Gull illustrates this. When a species is common, its migration dates are likely to be earlier than when it is scarce. This gull was very rare when "The Birds of Connecticut" (Sage and Bishop. 1913) was published. I saw my first one in 1916. By 1919 I began recording its arrival in spring migration. For the first 11 years thereafter its date of arrival averaged between May 6 and 7. For the entire period, 1919 to 1949, it averaged about April 26. But for the last 16 years the average was between April 16 and 17. These last years are probably more nearly the correct time.

The two species of orioles also indicate the extent to which the abundance of a species produces earlier dates. The Baltimore Oriole is exceedingly common, but the Orchard Oriole rather uncommon. In certain years I have found both species arriving on the same day, but the average arrival of the Baltimore Oriole is about May 5, whereas that of the Orchard Oriole is between May 9 and 10.

I have listed in Tables 1–3 all of the species that I am including in this paper. They are divided into lists of arrivals of summer residents; departures of winter visitors; and arrivals and departures of transient species. In each case the earliest, latest and average dates are given. This does not include all of the birds observed through the period, for there are resident species that do not migrate, and many species too rare to give definite dates on migration.

One of the interesting things about this study is the difference between different years, some being early, others late, and still others about average. In order to study these years and compare them I have selected 50 common summer resident species and arranged them in order of their average dates of arrival, from the Common Grackle in early March, to the Yellow-billed Cuckoo in the latter part of May (Table 4).

When one has a series of dates of arrival of any given species and adds them up and determines the average date of arrival, that date is likely to be a fraction. It would be incongruous to speak of the average date of arrival of the Yellow Warbler, for example, as May 1.52. All averages were calculated to two decimal places, however, to determine the order of listing of species (Table 4), especially of those whose average arrivals were on the same day. However, each fractional amount was "rounded-off" to the nearest date for Tables 1–4.

There is not a species whose average arrival is in March, that has not been known to occur, sometimes, in the winter. There is usually, however, some means of indicating the difference between migrating birds and wintering ones. Wintering birds generally occur in certain localities, but migrating ones are likely to be in new places. It is because of the lack of anything definite to distinguish winter birds from migrants that I left the Song Sparrow out of Table 4. Numbers of the birds spend the winter, but they are likely to sing in January or February, before migration begins; and while there are indications of migration early in March, I did not feel too sure of the dates.

From the data on average arrivals I have constructed diagrams, plotting the species horizontally, and the dates of arrivals vertically, the earlier dates at the bottom. Thus, the 50 species make a line that gradually rises from left to right.

Then, plotting the actual dates of arrival for any one year forms a very irregular line. Early dates come below the line of average arrivals, and late dates above it. I have thus made diagrams for all of the years for which I have

records, and I am using four of these as illustrations (Figs. 1–4). The four selected are 1938, 1940, 1917 and 1923. 1938 (Fig. 1) is the year of earliest arrivals in my records. 1940 (Fig. 2) is the most uniformly late year. 1917 (Fig. 3) is an unusual year, actually latest in total figures, but not uniformly so, and 1923 (Fig. 4) is nearest the calculated average.

For each year I determined the number of days and fractions of days that each species was early or late, added the late dates and the early dates, subtracted the smaller result from the larger, which determined whether the year was early or late, and divided the result by 50, which gave me the average number of days or fractions of a day that the species were early or late.

By this means I determined that the 50 species averaged 6.15 days early in 1938 and 3.55 days late in 1940. In 1923 they were 0.20 days early, and in the erratic year of 1917 they averaged 5.38 days late.

The year 1917 was a most remarkable one. In March and April the first 19 species of the 50 summer residents averaged a little less than 1 day late, but the remaining 31 species that had average arrivals in May were 7.98 days late. The weather in the early days of May was cold, raw and more or less rainy. I searched for birds at a time when one normally expects them to be arriving in numbers. On May 3 I found one American Redstart, but not another till May 15. On May 5 there was one Catbird and one Ovenbird. A Bobolink appeared on May 9, and a Veery on May 10. Then, on May 12, birds began appearing in numbers. From then until the 19th birds were everywhere. They were mostly warblers and thrushes and were down low in the shrubbery but were easily seen. Transient species were even later than the summer residents. Ruby-crowned Kinglets were present till May 18. Parula, Magnolia, Blackburnian and Bay-breasted Warblers remained till June 2, Tennessee Warblers till June 9, and Blackpoll Warblers to June 10. I have previously published something about the relation of these birds to tent caterpillars in this particular spring (1920. Auk, 37:312).

In the springs of 1923 and 1924 the arrival dates came close to the average. Actually, 1924 figured closer to the average, but the figures, species by species, were more erratic than 1923.

I hoped that the figures obtained would give some data on cycles of early and late years. While they did not show anything very definite, they did show that there were more late years in the early part of the period, and early years in the latter part. In the period from 1902 to 1934, the years for which I have records averaged 0.99 days late. From 1935 to 1949, the years averaged 1.48 days early. There were 15 late years and seven early ones in the first period. and three late ones and 12 early ones in the second period.

I thought that there might be some correlation between bird migrations and the growth of trees. I knew of only one tree that had been cut at a date that

was definite. A large white oak, that I had passed by many times, was cut down in the fall of 1956. When I examined its stump the outer rings were so small that I needed a lens to count them. There was one ring definitely wider than the others, and counting back from the outermost ring that ring proved to be 1938. But in the rings earlier than that I could find nothing definite.

Table 1
Arrivals of Summer Residents

Green Heron (Butorides virescens)       34       Apr. 27       Apr. 15, 1920       May 8, 1931         Black-crowned Night Heron (Nycticorax nycticorax)       34       Apr. 10       Mar. 25, 1945       Apr. 24, 1935         Wood Duck (Aix sponsa)       14       Mar. 25       Feb. 28, 1946       Apr. 25, 1925         Broad-winged Hawk (Buteo platypterus)       15       May 1       Apr. 17, 1925       May 16, 1947         Clapper Rail (Rallus longirostris)       19       May 15       May 2, 1930       May 28, 1922         Killdeer (Charadrius vociferus)       34       Mar. 23       Mar. 13, 1938       Apr. 3, 1940         Spotted Sandpiper (Actitis macularia)       40       May 2       Apr. 25, 1916       May 14, 1924         Mourning Dove (Zenaidura macroura)       30       Mar. 18       Feb. 19, 1944       Apr. 6, 1924         Yellow-billed Cuckoo (Coccyzus americanus)       28       May 18       May 7, 1949       June 1, 1920         Black-billed Cuckoo (Coccyzus erythropthalmus)       30       May 13       May 1, 1928       May 31, 1921         Whip-poor-will (Caprimulgus vociferus)       10       Apr. 28       Apr. 22, 1914       May 6, 1931         Common Nighthawk (Chordeiles minor)       33       May 15       May 5, 1919       May 27, 1927         <
nycticorax)         34         Apr. 10         Mar. 25, 1945         Apr. 24, 1935           Wood Duck (Aix sponsa)         14         Mar. 25         Feb. 28, 1946         Apr. 25, 1925           Broad-winged Hawk (Buteo platypterus)         15         May 1         Apr. 17, 1925         May 16, 1947           Clapper Rail (Rallus longirostris)         19         May 15         May 2, 1930         May 28, 1922           Killdeer (Charadrius vociferus)         34         Mar. 23         Mar. 13, 1938         Apr. 3, 1940           Spotted Sandpiper (Actitis macularia)         40         May 2         Apr. 25, 1916         May 14, 1924           Mourning Dove (Zenaidura macroura)         30         Mar. 18         Feb. 19, 1944         Apr. 6, 1924           Yellow-billed Cuckoo (Coccyzus         28         May 18         May 7, 1949         June 1, 1920           Black-billed Cuckoo (Coccyzus         28         May 18         May 1, 1928         May 31, 1921           Whip-poor-will (Caprimulgus vociferus)         30         May 13         May 1, 1928         May 31, 1921           Whip-poor-will (Caprimulgus vociferus)         10         Apr. 28         Apr. 22, 1914         May 6, 1931           Common Nighthawk (Chordeiles minor)         33         Apr. 28         Apr. 12, 1947
Wood Duck (Aix sponsa)       14       Mar. 25       Feb. 28, 1946       Apr. 25, 1925         Broad-winged Hawk (Buteo platypterus)       15       May 1       Apr. 17, 1925       May 16, 1947         Clapper Rail (Rallus longirostris)       19       May 15       May 2, 1930       May 28, 1922         Killdeer (Charadrius vociferus)       34       Mar. 23       Mar. 13, 1938       Apr. 3, 1940         Spotted Sandpiper (Actitis macularia)       40       May 2       Apr. 25, 1916       May 14, 1924         Mourning Dove (Zenaidura macroura)       30       Mar. 18       Feb. 19, 1944       Apr. 6, 1924         Yellow-billed Cuckoo (Coccyzus       28       May 18       May 7, 1949       June 1, 1920         Black-billed Cuckoo (Coccyzus       28       May 13       May 1, 1928       May 31, 1921         Whip-poor-will (Caprimulgus vociferus)       10       Apr. 28       Apr. 22, 1914       May 6, 1931         Common Nighthawk (Chordeiles minor)       33       May 15       May 5, 1919       May 27, 1927         Chimney Swift (Chaetura pelagica)       39       Apr. 28       Apr. 12, 1947       May 6, 1931
Broad-winged Hawk (Buteo platypterus)         15         May 1         Apr. 17, 1925         May 16, 1947           Clapper Rail (Rallus longirostris)         19         May 15         May 2, 1930         May 28, 1922           Killdeer (Charadrius vociferus)         34         Mar. 23         Mar. 13, 1938         Apr. 3, 1940           Spotted Sandpiper (Actitis macularia)         40         May 2         Apr. 25, 1916         May 14, 1924           Mourning Dove (Zenaidura macroura)         30         Mar. 18         Feb. 19, 1944         Apr. 6, 1924           Yellow-billed Cuckoo (Coccyzus         28         May 18         May 7, 1949         June 1, 1920           Black-billed Cuckoo (Coccyzus         30         May 13         May 1, 1928         May 31, 1921           Whip-poor-will (Caprimulgus vociferus)         10         Apr. 28         Apr. 22, 1914         May 6, 1931           Common Nighthawk (Chordeiles minor)         33         May 15         May 5, 1919         May 27, 1927           Chimney Swift (Chaetura pelagica)         39         Apr. 28         Apr. 12, 1947         May 6, 1931
Clapper Rail (Rallus longirostris)       19       May 15       May 2, 1930       May 28, 1922         Killdeer (Charadrius vociferus)       34       Mar. 23       Mar. 13, 1938       Apr. 3, 1940         Spotted Sandpiper (Actitis macularia)       40       May 2       Apr. 25, 1916       May 14, 1924         Mourning Dove (Zenaidura macroura)       30       Mar. 18       Feb. 19, 1944       Apr. 6, 1924         Yellow-billed Cuckoo (Coccyzus americanus)       28       May 18       May 7, 1949       June 1, 1920         Black-billed Cuckoo (Coccyzus erythropthalmus)       30       May 13       May 1, 1928       May 31, 1921         Whip-poor-will (Caprimulgus vociferus)       10       Apr. 28       Apr. 22, 1914       May 6, 1931         Common Nighthawk (Chordeiles minor)       33       May 15       May 5, 1919       May 27, 1927         Chimney Swift (Chaetura pelagica)       39       Apr. 28       Apr. 12, 1947       May 6, 1931
Killdeer (Charadrius vociferus)       34       Mar. 23       Mar. 13, 1938       Apr. 3, 1940         Spotted Sandpiper (Actitis macularia)       40       May 2       Apr. 25, 1916       May 14, 1924         Mourning Dove (Zenaidura macroura)       30       Mar. 18       Feb. 19, 1944       Apr. 6, 1924         Yellow-billed Cuckoo (Coccyzus americanus)       28       May 18       May 7, 1949       June 1, 1920         Black-billed Cuckoo (Coccyzus erythropthalmus)       30       May 13       May 1, 1928       May 31, 1921         Whip-poor-will (Caprimulgus vociferus)       10       Apr. 28       Apr. 22, 1914       May 6, 1931         Common Nighthawk (Chordeiles minor)       33       May 15       May 5, 1919       May 27, 1927         Chimney Swift (Chaetura pelagica)       39       Apr. 28       Apr. 12, 1947       May 6, 1931
Spotted Sandpiper (Actitis macularia)       40       May 2       Apr. 25, 1916       May 14, 1924         Mourning Dove (Zenaidura macroura)       30       Mar. 18       Feb. 19, 1944       Apr. 6, 1924         Yellow-billed Cuckoo (Coccyzus       28       May 18       May 7, 1949       June 1, 1920         Black-billed Cuckoo (Coccyzus       30       May 13       May 1, 1928       May 31, 1921         Whip-poor-will (Caprimulgus vociferus)       10       Apr. 28       Apr. 22, 1914       May 6, 1931         Common Nighthawk (Chordeiles minor)       33       May 15       May 5, 1919       May 27, 1927         Chimney Swift (Chaetura pelagica)       39       Apr. 28       Apr. 12, 1947       May 6, 1931
Mourning Dove (Zenaidura macroura)       30       Mar. 18       Feb. 19, 1944       Apr. 6, 1924         Yellow-billed Cuckoo (Coccyzus americanus)       28       May 18       May 7, 1949       June 1, 1920         Black-billed Cuckoo (Coccyzus erythropthalmus)       30       May 13       May 1, 1928       May 31, 1921         Whip-poor-will (Caprimulgus vociferus)       10       Apr. 28       Apr. 22, 1914       May 6, 1931         Common Nighthawk (Chordeiles minor)       33       May 15       May 5, 1919       May 27, 1927         Chimney Swift (Chaetura pelagica)       39       Apr. 28       Apr. 12, 1947       May 6, 1931
